# The Structure Plane

Information Architecture

I've opted for a simple tree design in order to keep my website simple to navigate, this will minimise the number of clicks for a user to reach where they want to be.

```
                        Home

        Albums        Merch        Events
```

IXD – Interaction Design

- Fixed Navigation bar at the top of the page, changing to burger icon and side nav on mobile devices.
- Band logo as alternate home button.
- Page title on nav bar will change colour depending on which page they are on to give visual reassurance of current location.
  - Hovering over page titles will also provide feedback to show the area is clickable.
- Album cards will have visual confirmation of tabs selected, by colour identifier.
- Form will have colour validation whether the information entered meets the requirements of input.
